## Green party b. c. platform 2020

The government will come to power in the midst of several emergencies in the October 24 election of British Columbians: the COVID-19 epidemic, an economic downturn as well as the climate and biodiversity crisis. NDP Leader John Horgan, BC Liberal Leader Andrew Wilkinson and Green Leader Sonia Furstenau all say b. C needs stimulus spending to guide -- and some observers see it as an opportunity to make major progress on the transition to a sustainable economy. Three major parties vie for seats in B. C Legislature agrees climate change is a threat, that greenhouse gas emissions must be reduced and ultimately our economy's dependence on oil is ending. This is something that we cannot take for granted, said Karen Tam Wu, regional director of British Columbia at the Pembina Institute, which other jurisdictions mentioned, those basics are often up for debate. It's really an opportunity to build for a safer, more resilient future, she said. Get Narwal in your inbox! People always tell us that they love our newsletter. Find yourself with our weekly dose of ad-free, independent journalism The NDP, BC Liberals and Greens have all made some form of pledge to increase the number of charging stations for electric vehicles, invest in transit and encourage energy retrofits in homes and other buildings. When it comes to the scale of these investments and other issues, however, they do not see eye to eye. The NDP is building on its 2018 CleanBC plan with a commitment to reach net-zero emissions by 2050. The green platform is committed to a more ambitious target of net-zero emissions by 2045, in line with California. Meanwhile, the BC Liberals have said they are b as a climate leader. C would like to rebuild, but not commit to specific emission reduction targets. As voters are in the 2020 B. C Weighs his choices in the election, here's where the parties stand on environmental issues. where b . C's political parties stand on climate change in CleanBC, the NDP's 2018 climate plan, Horgan's government committed to reducing greenhouse gas emissions by 40 percent below 2007 levels by 2030 and below 80 percent by 2050. But new measures are needed to meet that goal. Modeling in the 2019 Climate Change Accountability Report shows B. C. Greenhouse gas emissions are expected to be 5.5 million tonnes lower than its 2030 target without additional steps to cut. If re-elected, ndp b. C is committed to requiring legislation to have net zero emissions by 2050, meaning that any greenhouse gas emissions would have to be offset by carbon sinks, carbon capture and storage or other technology. a vocative lady. C. To help reach that goal, the NDP says they are working on carbon capture technology. C will invest in entrepreneurs, use incentives to advance energy efficiency construction retrofit, mines, pulp mills, oil and gas CleanBC will invest in industrial emissions strategy to help plants and other industrials Work to reduce their emissions, and reduce methane emissions. The NDP has also again committed to reviewing oil and gas subsidies. Read more: 'I don't think we'll ever catch up': B. C methane targets out of reach amid rising LNG, fracking Furstenau's greens, meanwhile, are aiming for net zero emissions five years ago, 2045. The party says it will set an interim 2025 target and develop an accountability framework to ensure that B. C. Meet your legislator targets. The Greens have also committed to setting specific targets for industrial sectors, eliminating oil and gas subsidies, restoring forests and wetlands that serve as carbon sinks and strengthening energy efficiency requirements in buildings. We cannot transition our economy away from fossil fuels at the same time as increasing subsidies to fossil fuel companies. It just makes no sense, Furstenau said during an online climate and environment debate organized for change on Oct. 15. We know we have to do more to tackle the climate crisis, said George Heyman, who has served as the NDP's minister of environment and climate change strategy since 2017. We have introduced accountability legislation that requires reports on our progress by minister every year including comments by an independent climate council and we have to put an environmental lens on all oil and gas royalty credits and are committed to taking a good, tough, comprehensive look at them, Heyman said. Methane is a powerful greenhouse gas with a climate warming potential 25 times that of carbon dioxide at a 100-year timescale. Global efforts to cut methane emissions are underway, and as a part of Canada's international commitments, B. C has set a target of reducing provincial methane emissions by 45 percent by 2025 compared to 2014 levels. But B. C LNG is trying to meet that target at the same time as pursuing ambitions some experts may meet the confused province. PHOTO: Garth Lenz/Narwal The Greens have also immediately committed to bringing back the scheduled carbon tax hike, which the NDP halted due to the epidemic. while bc liberals b . C vows to make a climate policy leader and develop a comprehensive strategy to reduce emissions, the Party platform does not include any specific reduction targets. bc liberals say b . C's next challenge is addressing emissions from buildings and transport. The party says it will encourage the creation of retrofits and update building codes to meet energy efficiency requirements while respecting regional differences. Wilkinson has also committed to investing in renewable energy and research in new technologies, including carbon capture. The BC Liberals will work with the federal government to review carbon tax hikes in light of the recession. In terms of fossil fuel subsidies, we have no secret that we think That we've made is sure we need to make sure we're invigorating the economy in ways to get people back And at the same time greenhouse gas emissions start to drive down, Peter Milobar, bc Liberal candidate for Kamloops-North Thompson and former environmental critic of the party, said during the Oct. 15 online environmental debate. We are sure that any subsidies that need to be worked on there, with time to be phased out to ensure that we start a transition away from fossil fuel economy - which I think we all agree is going to happen in the next term - that we are going to be there to make sure we are moving in a way that is the same time as an official people that we have. Are there are support on the need to make the transition happen, he said. where b . C's political parties are standing on reducing transportation emissions the BC Liberals, Greens and NDP have all committed to taking action on transportation, which b. C has about 40 percent of greenhouse gas emissions. The NDP has promised new incentives for new and used zero-emission vehicles to make them more accessible to low-income people and increase the number of vehicle charging stations with incentives and legislation. They are also pledging to cut the provincial sales tax on e-bikes. The NDP will also work with communities in southern Vancouver Island, to improve transit connections in Surrey and Langley and other communities. The party also wants to expand Highway 1 through Fraser Valley. The Greens have committed to developing climate and sustainability criteria for all future capital projects, including the transport sector. Like the NDP, the Greens say they will invest in Southern Vancouver Island transit. The party wants to work with local governments to develop long-term stable financing for transit, including Translink, BC Transit and BC Ferries, and B. C wants to speed up the transition to zero-emission vehicles by requiring all new non-commercial vehicles sold in. The Greens have committed to making them more affordable, investing in electrification of transit systems and removing PST on electric vehicles used to expand charging infrastructure. BC Liberals have pledged to boost the number of electric vehicle charging stations and continue to expand public transit south of the Fraser River, in the Fraser Valley and in North Vancouver. The party has also promised longer transit hours to review the ferry program with an eye toward hourly service on the interior, north and Vancouver Island and on busy routes. Where B. C's parties are standing on the Site C dam during the TV leaders' debate Oct. 13, Horgan said, adding that he will wait to decide on the future of the controversial Site C Dam until he receives the results of a report from Peter Milburn on the project's geo-technical issues and economics. a vocative lady. Milburn, a retired deputy minister of finance with the C government, was appointed in July to review the project. According to a new report from a U.S. energy economist BC Hydro Could save more than \$100 million a year initially if the project is cancelled. At the end of September, Furstenau province called for to halt the construction of the dam until geo-technical issues are reviewed. He said in a press release. C B. The future of clean power in C is small-scale, renewable energy that provides good jobs and economic opportunities throughout the province. Mike Bernier, bc Liberal candidate for Peace River South and co-critic of the Party for Transport and Infrastructure, said it would be irresponsible to cancel the project. If the project was canceled now, can you imagine, if it was three, 4,0 dollars (in sinking costs) three years ago, would it double that now? Who knows, Bernier told Business in Vancouver. Site C Dam construction in 2018 along the River Shanti. a recent report from a u .S. energy economist found bc hydro customers would have an initial \$116,0,0 a year savings if b . C government cancels construction of Site C dam and savings will only develop over time. The report comes at a critical time for politicians making promises about the fate of the publicly funded project. Photo: Garth Lenz/Narwal How B. C's political parties plan to create green economy the NDP says they are not going to be a B. C wants to make a global producer of low-carbon products and services. To get there, they commit to investing in high-speed Internet across the province, supporting innovative groups that bring companies, researchers and entrepreneurs together and work with the federal government and BC Hydro to expand electrification infrastructure. The NDP has committed to creating a mining innovation center to support training, better regulations, environmental management and low-carbon approaches to mining. Read more: Fact Check: B. C LNG ambitions are compatible with your climate goals? With continued investment in forest revitalization and wildfire protection, the NDP is promising job creators plan to direct more logs and a portion of the annual acceptable deductions to companies that create new jobs. The Greens have pledged a \$1 billion strategic investment fund to support business innovations that are toward a \$500 million fund to support a zero-carbon economy as well as sustainable jobs. C makes changes. The Party is committed to developing a clean jobs program focused on areas such as planting trees, conserving, environmental remediation and climate adaptation, and implementing a just transition for oil and gas workers. The party says it will support the creation of biofuels and clean hydrogen strategy to help transform fossil fuels for transportation. The Party has made further commitment to changes in the forestry industry, including redistributing the tenure of first nations and communities from some major companies and shifting forest management from focusing on wood to managing all forest values. BC Liberals promised to cut timeline for mine allowed in half Advance Hydro Export Export New environmental work experience opportunities in the U.S. and other provinces, provincial parks, and investments in tree planting. The party says it will develop legislation to protect the working forest to provide greater certainty, work to improve forest management and reduce production costs. where b . C's political parties are standing on LNG, the BC Liberals say, saying they will accelerate indigenous-led LNG export projects and speed up the review and approval process for LNG projects. While the BC's liberal platform does not provide details about the scale of LNG development, Tam Wu warns that Pembina's analysis shows there is very little room for additional LNG development that will increase carbon emissions if B. C intends to meet its existing 2050 targets. Horgan meanwhile, LNG Canada has promised to monitor the project to ensure it falls within climate targets. NDP platform says project shows B. C can balance our economic environment, social and reconciliation priorities. The Greens, which have long opposed LNG, have pledged to shift away from fossil fuels and end all fossil fuel subsidies. Instead, the party supports the development of biofuel and hydrogen strategies to help transform fossil fuels into transport. With LNG Canada's approval, Northeast B. C is expected to explode hydraulic fracturing operations, such as this one near Farmington. Photo: Garth Lenz/Narwal Jahan B. C's political parties stand

on fish farms and wild salmon. C has pledged to work to increase the processing of wild fish caught in C, double funding for the BC Salmon Restoration and Innovation Fund, which is a joint effort with the federal government and to develop new plans to protect wild salmon. The Greens meanwhile have committed to land in an effort to protect wild salmon for the fish farming industry transition. The party promises to cancel tenure for open-net pen fish farms and develop a land-based industry to work with Fisheries and Oceans Canada, First Nations and industry. The Greens have also promised to bring in a new coastal law to protect coastal ecosystems. The BC Liberals have pledged to appoint a minister for fisheries and coastlines focused on enhancing and protecting fish resources and coastal ecosystems. The party has also pledged more robust measures to protect salmon and steelheads. where b . C's political parties stand on Indigenous rights in its 2020 forum, the NDP is committed to creating a dedicated secretariat to ensure all new laws and policies align with the UN Declaration on the Rights of Indigenous Peoples, which was recognized in provincial law in 2019. The party has also pledged to move toward long-term agreements with indigenous nations that support reconciliation, self-determination and economic freedom. Greens on rights of Indigenous Peoples Act Is promised to ensure an action plan to implement and supported with enough resources and to work with First Nations toward energy independence. The BC Liberals have pledged to work with indigenous nations to resolve outstanding issues of rights and title, to define how UNDRIP relates to land use decisions, provide new funding to support First Nations to negotiate economic benefits and new funding for First Nations to invest in economic opportunities. Terry-Lynn Williams-Davidson, an environmental and Indigenous lawyer and member of the Haida Nation, said governments still have work to do to make room for Indigenous jurisdiction that arises from the unextinguished title. He said projects such as site C dam and LNG development are still proceeding without the consent of indigenous nations. Treaty 8 First Nations have long been opposed to the Site C project, which will have a considerable impact on fish, wildlife, cultural sites and treaty rights. Some First Nations have also expressed significant concerns about liquefied natural gas projects. In 2015, the legislative body of the Haida Nation passed a resolution banning mass exports of fossil fuels through its territory and b. C called for opposing plans to develop the LNG industry. Coastal Gaslink Pipeline, which is a northeast B. C to The LNG terminal in Kitimat, which will carry natural gas, has also faced considerable opposition by Wet'suwet'en hereditary chiefs and their supporters. A good step is recognizing a role for Indigenous peoples in joint decision-making. This is something that haida nation has done for more than 30 years with the Canadian government in relation to Gwaii Haanas and we have taken steps with British Columbia to jointly manage land outside Gwaii Haanas, she said. But there are still problems in joint decision-making when the Crown believes they approve the final right or not [sanction] proposals to proceed with resource extraction without the consent of indigenous peoples, with the belief that there is only one obligation to consult and not quite address the concerns of Indigenous people, she said. Freda Husson, center, and her sister, Brenda Mitchell, stand at the ceremony while they wait for police to enforce an injunction to remove Wet'suwet'en pipeline opponents along the route of the coastal GasLink pipeline in February 2020. Both the women were arrested by the RCMP. Photo: Amber Bracken/Narwal How B. The political parties of C will solve the biodiversity crisis with a climate emergency, the world is facing a crisis of biodiversity. a vocative lady. C remains one of only three provinces without provincial law in Canada to develop such a law to protect endangered species, despite an NDP promise in the 2017 campaign. While the NDP has not renewed that commitment, the Greens have promised to enact the Endangered Species Law. READ MORE: British Columbia for its part for emerging extinction crisis, NDP neighboring court Is vowing defense to work with IS The wildlife corridor, more old to protect development forests, to create a watershed protection strategy and to ensure large industrial projects are fully bonded going forward so that the industry pays the full cost of environmental cleanup. The NDP has also pledged to develop a new strategy to protect coastal housing, particularly committed to looking at cargo traffic management around southern Vancouver Island and the Gulf Islands. and to develop new plans to protect wild salmon. The Greens have established the right to air, clean water and healthy ecosystems as well as information rights to ensure transparency around decisions affecting the environment. C is committed to the Environmental Charter. The Party has also committed to ending outdated development logging in high-risk ecosystems, introducing comprehensive watershed planning and developing a wetland strategy, and to bring in a new coastal law to protect coastal ecosystems. The Greens have pledged responsibility for fish and wildlife management to relocate the Environment Ministry and increase funding for wildlife and habitat conservation. The BC Liberals have committed to ensuring that there is no net loss of lakes, working with First Nations, the federal government and communities to accelerate reforestation and restore wildlife populations. The party has also pledged to appoint a minister for fisheries and coastlines focused on protecting fish and coastal ecosystems.
